Heated Purge GC/FID**

ARF: 25656

Project: Bechtel Hanford, Inc.

***Sample Receipt Information:***

The sample group was assigned Analytical Request Form (ARF) # 25656, and the sample numbers and requested analyses were compared to the chain of custody. No exceptions were encountered.

**Sample Table:**

CLIENT ID	APPL ID	Matrix	Date Sampled	Date Received	Date Extracted	Date Analyzed
BOLKB7	53908	Soil	5/29/97	8/01/97	8/01/97	8/05/97
BOLKB8	53909	Soil	5/29/97	8/01/97	8/01/97	8/05/97

***Sample Preparation:***

The samples were received past holding time. Approximately ten grams of sample was weighed and purged while heating using a Dynotech auto sampler and injected into a Hewlett Packard GC/FID. The column used is a DB-624 30m in length 0.53mm id with a film thickness of 0.12 $\mu$ . Surrogates were added to equal a 10ppb response. The instrument was calibrated for gas and BTEX. Purgable amines present should have responded under these chromatographic conditions. The chromatograms are included. There were no peaks present other than the surrogates. No forms 1 are included.

***Analysis Information:***

**Samples:**

The samples were analyzed by GC/FID. Surrogates were added at normal concentrations. No MS/MSD or LCS was performed. Since there was no target analyte list, there are no forms 1. The chromatograms show no detection of purgable amines.

**Calibrations:**

A calibration standard for gas and BTEX was used to ensure the system was operating satisfactorily.

**Blanks:**

No target compounds were detected at or above the reporting level.

**Surrogates:**

All surrogates passed as per the method.

**Spikes:**

Spikes were not performed on this set of samples.

**Summary:**

All data were acceptable. No problems were encountered.

***Analysis Information:***

**Samples:**

The samples were analyzed by EPA Method 8080. The samples had a distinctive odor. A sample aliquot of 30grams was extracted with methylene chloride by sonication. Surrogates were added at normal concentrations. Method 8080 was followed with the exception that no MS/MSD or LCS was performed. The detected target analytes are listed on the forms 1.

**Calibrations:**

A calibration standard was injected after the samples were run. The samples were quantified using the most recent curve.

**Blanks:**

No target compounds were detected at or above the reporting level.

**Surrogates:**

At least one surrogate passed as per the method.

Surrogates were added at normal concentrations. Internal standards were added at normal concentrations. Method 8270B was followed with the exception that no MS/MSD or LCS was performed. The detected target analytes are listed on the forms 1. The peaks not identified as target analytes were searched through the Wiley Library containing 138,000 compounds. This library contains the pesticide compounds also.

A tentatively identified compound summary list is provided for your information. The TICs have been examined by our analyst and project manager and the best hit has been chosen. Copies of the raw data is included for your review.

**Calibrations:**

The instrument was tuned to DFTPP. The samples were injected immediately following the tune. A calibration standard was injected after the samples were run. The samples were quantified using the most recent curve.

**Blanks:**

No target compounds were detected at or above the reporting level.

Case Narrative  
EPA Method 8260  
Volatile Organics

ARF: 25656

Project: Bechtel Hanford, Inc.

**Sample Receipt Information:**

The sample group was assigned Analytical Request Form (ARF) # 25656, and the sample numbers and requested analyses were compared to the chain of custody. No exceptions were encountered.

Sample Table:

CLIENT ID	APPL ID	Matrix	Date Sampled	Date Received	Date Extracted	Date Analyzed
BOLKB7	53908	Soil	5/29/97	8/01/97	8/01/97	8/01/97
BOLKB8	53909	Soil	5/29/97	8/01/97	8/01/97	8/01/97

**Sample Preparation:**

The samples were received past holding time. Extractions and analyses were performed upon receipt by EPA method 8260. The samples were analyzed using a Hewlett Packard GC/MS.

**Analysis Information:**

**Samples:**

The samples were analyzed by EPA Method 8260. The samples had a distinctive odor not consistent with routine volatile compounds detected using this method. A sample aliquot of one-half gram was run by heated purge injection. Surrogates were added at normal concentrations. Internal standards were added at normal concentrations. No compounds were detected. No nontarget compounds were present above the reporting limit. All compounds detected are listed on the form 1 and labeled as "J". The definition of "J" is an estimated value below the quantitation limit but above the method detection limit. There were no peaks present to search as tentatively identified compounds.

**Calibrations:**

The instrument was tuned for Bromofluorobenzene. No calibration was performed within the 12 hour period as discussed with the client beforehand. The quantitation was performed using the most recent curve. These calibrations were performed according to the method. All compounds met the criteria for the method.

**Blanks:**

No target compounds were detected at or above the reporting level.

**Surrogates:**

All recoveries were acceptable

**Spikes:**

Spikes were not performed on this set of samples

**Summary:**

All data were acceptable. No problems were encountered.

**CERTIFICATION**

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the hard copy has been authorized by the Laboratory Manager or his designee, as verified by the following signature.
